## DOORS & WINDOW SYSTEMS

|                                                                                     |                                  |                                                                                                                            |
|-------------------------------------------------------------------------------------|----------------------------------|----------------------------------------------------------------------------------------------------------------------------|
|    | <b>Doors and windows</b>         | Design system that adapts to wall and floor-to-ceiling and floor-to-ceiling installations.                                 |
|    | <b>Facades and great heights</b> | Enveloping system, with high wind resistance, with panoramic views that allow the entry of natural light of natural light. |
|    | <b>Sliding</b>                   | Sliding opening systems with adaptable solutions adaptable to the specific needs of each project.                          |
|    | <b>Panoramic views</b>           | System focused on creating open and ventilated ventilated environments. Less aluminum, more glass.                         |
|   | <b>Against hurricanes</b>        | Guaranteed system in environmental protection and extreme climates.                                                        |
|  | <b>High-strength resistance</b>  | Supports heavy loads.                                                                                                      |

## TYPES OF GLAZING

|                                                                                     |                   |                                                                                                                                               |
|-------------------------------------------------------------------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
|  | <b>Monolithic</b> | Glass sheet consisting of a single sheet, with a variety of thicknesses.                                                                      |
|  | <b>Laminated</b>  | It is a type of safety glass that is composed of of two or more layers of glass bonded together by an intermediate layer of plastic material. |
|  | <b>Insulated</b>  | Monolithic or laminated crystals separated by a air or gas chamber, which generate customized thermal effects effects.                        |

## SYSTEMS ENHANCE

|                                                                                       |                                 |                                                                                                                                              |
|---------------------------------------------------------------------------------------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
|    | <b>Hermetic</b>                 | System designed to create impenetrable structures by air, water or any element.                                                              |
|    | <b>Acoustics</b>                | A system that significantly reduces outside noise and allows adequate hearing levels                                                         |
|    | <b>Low-E</b>                    | System designed to control environmental effects, reducing the use of air conditioning equipment.                                            |
|    | <b>What is a monolithic?</b>    | It is a single sheet of glass that is manufactured by flotation process.                                                                     |
|    | <b>What is laminated glass?</b> | They are two crystals held together by an interlayer. an intermediate layer.                                                                 |
|  | <b>What is an insulated?</b>    | Combination of glass panes with an intermediate air space that creates an additional barrier that decreases air-to-air temperature transfer. |
|  | <b>What is tempered glass?</b>  | Processed by thermal or chemical treatments to increase its resistance compared to normal glass.                                             |

# DOORS & WINDOW SYSTEMS

Our experience has led us to design and perfect solutions, taking into account every detail of each project. The Doors & Window Systems are made up of these 4 elements.

## GLAZING

We take and include innovations in technology worldwide to provide solutions that guarantee the objective of each project.

## WINDOWING

Our team seeks to follow and create trends, offering a unique and modern style, focused on solutions that are timeless while maintaining quality and functionality over time.

## OPERATOR

We design projects to be able to offer our clients variety and options that increase the functionality and design of the solutions; leaving the common offer in the market, giving a product of exalted quality.

## OPENING

We create Doors & Window Systems that guarantee the correct use of the opening solution of the project, meeting the specific needs of the client.

# SEICENTO FORTE SYSTEM

High-end hurricane-certified sliding door system. The perfect solution for hotels, residences and commercial spaces looking for a spectacular panoramic view and great design without sacrificing strength.

- Maximum sheet dimensions of 4 m wide x 4 m high, and different frame widths.  
\*Consult weight and maximum dimensions according to typology.
- Load capacity up to 600 kg.
- It offers thermal and acoustic options, always preserving airtightness and watertightness.
- With option to include mosquito netting.

# SYSTEM **SEICENTO**

Variation of systems

**Seicento:** Original system for projects of high aesthetic level, quality and resistance. It is characterized by providing a functional solution and a high sense of innovation.

**Forte:** Evolution of the original SEICENTO system, focused on creating spaces with a low perception of the need for a door, high weight resistance and practical opening mechanisms.

**Forte Minimal:** Reinforced evolution of the SEICENTO MINIMAL system, which offers hurricane-certified projects while maintaining high-level aesthetics.

**NAMI**  
HURRICANE CERTIFICATION

# TYPE OF GLAZING ● ● ● ●

System designed to support and highlight any type of glass and configuration. Recommended for projects requiring large openings in sliding systems.

● From **6 mm** to **30 mm** glazing.

# SYSTEM TYPE

A system designed to meet the aesthetic needs of any modern international development. Using strong and durable aluminum, our **SEICENTO** system offers a guarantee superior to standard market options, ensuring design and quality for your project.

- High-performance gates.
- Specialized system for high rise projects.
- Modern profiles with straight, defined cuts, without curves.
- Electro-painted, anodized or sublimated finishes.
- Multi-rail, with no limit to the number of rails.
- Seicento runs 5 mm above the floor, whereas the
- Seicento Forte saves 1 cm of the baseboard in the rail to provide greater safety.
- The Seicento minimal has a greater panoramic view due to the dimensions of its overlaps, which can be simple or reinforced.

# TYPES OF OPERATOR | OPENING

With high quality locking systems, the system **SEICENTO** offers multiple variations in types of operators and opening. Giving the user solutions outside the regular market, with the guarantee of exceeding expectations in quality and functionality over time.

- Cast iron trolleys with stainless steel wheels
- Multipoint or single point system, key lock option.
- Handle
- Mortise closure

# CLIENT **REVIEWS**

- X** The perfect match for the needs of our new home.  
Undoubtedly, a superior design guaranteed to last a lifetime.  
**JOSÉ CASAS** Valle de Bravo.
- X** After several consultations with our AviPartner, we found the perfect product that eliminates 80% of the exterior noise and used it in the remodeling of our office.  
**GRISelda MAGAÑA** Interlux, CDMX.
- X** The hotel looks spectacular after the change in the The Doors & Window Systems that we found in AviGlass.  
**JAVIER ROBLEDO** Posadas Group, Los Cabos.
